

GRAPHICAL USER INTERFACE FOR INDICATING DEVICE FAILOVER

By:

Becky V. Berndt

Daniel J. Maslowski

ABSTRACT OF THE DISCLOSURE

A computer-implemented method and apparatus for indicating a failover data path in a graphical user interface environment is provided. The method includes graphically displaying at least one source device; graphically displaying at least one target device; graphically displaying a first data path between at least one source device and at least one target device; and in response to a failure in the first data path: graphically indicating the failure in the first data path; and graphically displaying a failover data path.
